

Exact cosmological models with a peculiar velocity field

Monday, 17 September 2018 09:30 (30 minutes)

I examine two classes of exact solutions of Einstein's equations describing matter-energy sources in a non-comoving frame, either within a single fluid or a two fluid approach. These models can be used to test various assumptions on backreaction and to examine the observational effects of the Hubble flow.

Presenter: SUSSMAN, Roberto (ICN-UNAM)

Session Classification: Monday Session 1
